Title:	Energy Policy	Revision:	1
Comments:		Approved:	Kevin Wanless

Niramax Group Ltd. intends to conserve energy, in order to reduce operating costs and to minimise damage to the environment. We will try to reduce our energy consumption by the use of best practice, modern engineering solutions, and by encouraging the commitment of employees.

It is the intention of Niramax Group Ltd. to:

- Ensure that staff, customers, and suppliers should be made aware of our Energy Policy
- Adopt a whole-life costing approach to purchases, where particular attention is paid to energy efficiency
- Reduce energy consumption, and thus carbon emissions
- Improve overall energy efficiency
- Engineer solutions for saving energy rather than rely solely on manual intervention
- Encourage and motivate employees to save energy
- Publicise these objectives and targets with a view to save energy.
- Ensure all items identified in our action plan have been implemented
- Consideration given when purchasing materials.
- Introduce energy conservation at the induction of new employees, customers and suppliers.
- Introduced a maintenance programme that will in effect improve fuel consumption and have larger vehicles for collection round top prevent additional road mileage to reduce fuel and improve carbon emissions.

This energy policy will be reviewed regularly and will be updated to take into account changing circumstances and to ensure it provides opportunities for continuous improvement. The Energy Policy will be managed by the IMS Management Representative, who will have the full support of the Chief Executive.

We give our full commitment to this initiative and ask all our staff to give their wholehearted support to it as well.

Neil Elliott

Managing Director
